

How to Plan the Bathroom you've always wanted

A Book of Suggestions from

CRANE

Be happy with your **BATHROOM**

Until recently, bathroom facilities in the average home have been pretty largely handled by providing an average amount of convenience with minimum equipment in a minimum space. But now, more and more people are realizing that minimum convenience is not enough. Today, convenience is getting sensible attention; and bathrooms are being planned to serve the needs of the family to the best advantage. Individuality is striding hand in hand with convenience. People are thinking for themselves in terms of what will suit them best. Hence this book. It is a guide for you to help you plan your bathroom. Let's start with three points—things to remember before getting into the subject of "having the bathroom you've always wanted."

FAMILY REQUIREMENTS

Sit down and figure out your requirements. How many are there in the family? What time schedules dictate morning use? Are there any slow-pokes? You need to answer these and similar questions to determine what bathroom facilities you require. For maximum convenience a good basis to follow is a bathroom for every bedroom.

ECONOMY—EFFICIENCY

As you go through this book you may find that the only limitations to your own ideas will be the placing of the piping which is necessary to make your bathroom efficient. Hence it will be wise to check your bathroom ideas with your architect

if you are building, with your plumbing contractor whether you are building or remodeling. These experts know plumbing efficiency and can help you attain your ideas as economically as possible.

QUALITY MATERIALS

Remember when you are selecting plumbing equipment, whether for a new home or for a remodeled one, you expect it to last many years. The manner in which this equipment is made—the way in which it is installed have much to do with assuring long life as well as the satisfactory operation you have a right to expect. In permanent equipment of this nature be sure it is the best obtainable—installed by a licensed plumbing contractor.

TO HELP YOU WITH YOUR PLANNING

After you have made your own decisions, you can go with your architect or plumbing contractor to the nearest Crane Display Room, where you will find competent Crane Representatives ready and willing to help you select particular fixtures for homes both large and small, new and old.

In the Crane Planner you will find complete information on every basic type bathroom. Bathrooms illustrating these plans have been built and photographed in color. These photographs are reproduced in the Planner and complete specifications for all the wall and floor materials, fixtures and accessories used in these rooms are available. Manufacturers names and product identification are included to make this service a valuable aid to you.

IT'S A MATTER OF GOOD PLANNING TO GET WHAT YOU WANT

Let's look at a bathroom from its "use-value." For if you start to solve your bathroom problems with that idea foremost you will be able to get much greater convenience and efficiency in the same amount of floor space and at little if any additional cost.

Before we get into the subject of planning the actual room too far, let's talk a little about how the function of the bathroom today differs from that of a few years past.

Never before have opportunities to be individual in the planning of your bathroom been so great. Instead of the three standard fixtures that have graced bathrooms since bathrooms began, (the tub, the lavatory and the closet) ideas have changed. Nowadays people figure the needs of their family. They use two lavatories or a shower stall or other means to provide the last word in convenience. A dental lavatory exclusively for brushing the teeth will appeal to the fastidious. And that isn't all! Today, when so many new materials are available, color is limited only by your own imagination. You mix your colors with zest. Wall materials, floor materials, linens and other accessories are available in a host of colors which you can assemble as you please.

FOR COMFORT AND CONVENIENCE

But you don't stop with color and unusual combinations of fixtures. You think of adequate lighting—shaving lights, make-up light, etc. You want plenty of mirrors on doors, in front of windows or in other convenient places. You may even have two medicine cabinets. You

Modern bathroom planning provides adequate facilities—keeps lines from forming at the bathroom door.

want several electric outlets for the electric curling iron, the electric razor, an electric heater or a sun lamp.

STORAGE

After all, the logical place to keep bathroom linens, soap, toilet paper, etc., is *in* the bathroom. Formerly there was no provision made for such storage, but now better planning and modern equipment make it possible to provide sufficient space somewhere in the room for at least a part of your reserve supplies. If you like colorful towels, they can be placed on shelves behind glass panels so that their bright hues will help in the decoration of the room. If there's enough extra wall space, a dressing table will allow making-up in the bathroom where, of course, it's so convenient.

Other incidentals that are appearing more and more in bathrooms these days are clocks, scales, sun lamps, chairs or stools, attractive little shelves, even a small table for books and magazines or smoking equipment.

With all those things to keep in mind, plus your own needs and desires as far as adequate bathroom facilities are concerned, you can have a great deal of fun planning exactly what you want.

Below are illustrated two of today's bathrooms, planned for convenience of the families they serve.

Smart Modern Ideas

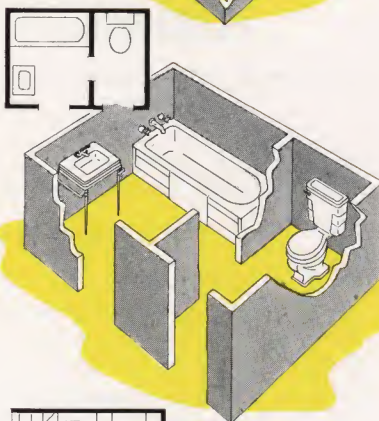

THE RUSH HOUR SPECIAL

Here's a bathroom plan that provides a complete bath which is accessible both to the master bedroom and to the hall—with an additional lavatory and closet that can be used with privacy at the same time. In some installations a closet and lavatory are installed in one room—a bathtub and lavatory in the other. This arrangement requires little more room than a conventional bathroom.

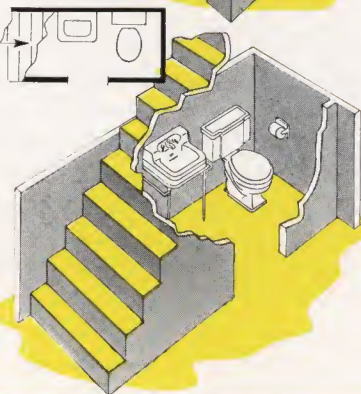

THE TOILET STALL

From England comes the idea of taking the toilet out of the bathroom proper and putting it in a separate little compartment by itself. A hall door to this little room gives a double service feature by providing both privacy and accessibility. A second lavatory might be added providing extra convenience.

THE HALF-BATHROOM

Tucked away on the main floor, beneath a stairway, or in a small clothes closet, a room equipped with a lavatory and closet is a worthy addition to bathroom facilities in any home. Small size lavatories and inexpensive toilets, plus some individual color selections can make your half-bathroom charming, as well as useful.

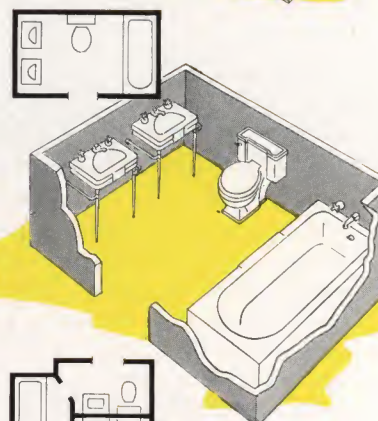

FOR THE UNUSUAL SPACE

In remodeling it is often possible to wall off the end of a bedroom or part of a hall and have the comfort of an additional bathroom. The *Neurologue* Receptor Bath makes it possible to have a full-length bathtub with a shower even in this narrow space.

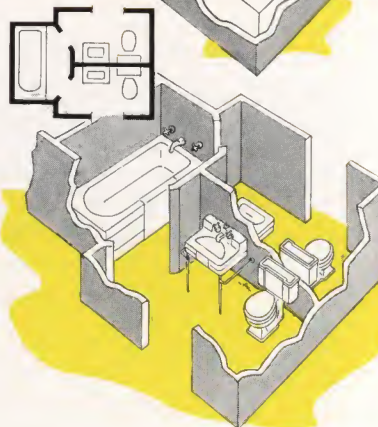

TWO LAVATORY COMBINATION

If space does not allow you to have more than one bathroom in your house, think about putting two lavatories in that bathroom. That's a way to beat convenience at its own game. Or perhaps you would prefer to have the extra lavatory in the hall or in a bedroom—at any rate its modest cost will prove a worth-while investment in relieving congestion.

THE PARTITION BATH

Another "rush hour" idea is the partition bath which uses only the space ordinarily required for one bathroom. The floor area is divided by a partition—a toilet and a lavatory occupy each section of the space, and the tub is accessible to both. Ideal for homes that have adjoining bedrooms.

YOUR HOME SHOULD HAVE ADEQUATE BATHROOM FACILITIES

Ample bathroom facilities play a large part in the comfort and enjoyment you get from your home. The ideal, of course, is a bathroom for every bedroom and it is a great convenience for each member of the family to have his own bath.

On this page are shown interesting ideas and suggestions on how bathroom facilities in the home can be increased, often at very little expense. In the complete Crane line of fixtures are many compactly designed to fit in small space or in rooms of unusual

proportions. This makes it possible to convert the end of a hall—an unused closet or the space below a stairway—into a convenient bathroom or a half bathroom, which will remove the congestion that usually occurs just before breakfast and just before bedtime.

A little ingenuity can give your home the increased facilities an additional bathroom brings. Your local Plumbing Contractor will gladly help you in determining how you can have this added convenience in your home.

FOR *New Bathrooms* OR FOR REMODELING OLD ONES

This charming bathroom has many new features to recommend it in the modern home. The tub is the Crane Marshall, the closet the Siwelclo and the lavatory the Corwith with chromium plated legs and towel bars. A dental lavatory has been installed to give greater convenience and greater sanitation. A glass shield over the tub eliminates the use of a shower curtain and the mirror over the window assures plenty of light.

Glass brick, full length mirrors and ceramic tile walls give a regal charm to this modern bathroom. The curtain may be drawn around the closet to give greater privacy. The bathtub is the Crane Neuvogue, the lavatory the Corwith Compeer and the closet the Manor. The dental lavatory at the extreme left is the Corwith.

AT the top of this page are two photographs of modern bathrooms. Note the convenience, the unique decoration and the general air of efficiency which they radiate. Yet these are modest bathrooms which fit the purposes as well as the purses of the average family.

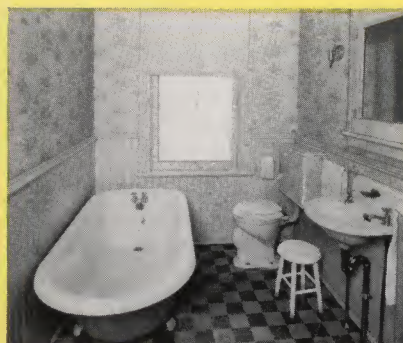

How easily and how inexpensively an old bathroom can be converted into a modern, efficient one is illustrated in the actual before and after views shown below. Such

changes as these can be made in your bathroom and for far less than you probably would expect to pay.

The pictures on this page give you an excellent comparison of present-day bathroom equipment with that of even a decade ago. Here is an accurate example of the progress made in recent years in bathroom planning to give you greater efficiency, convenience and comfort in a more attractive setting.

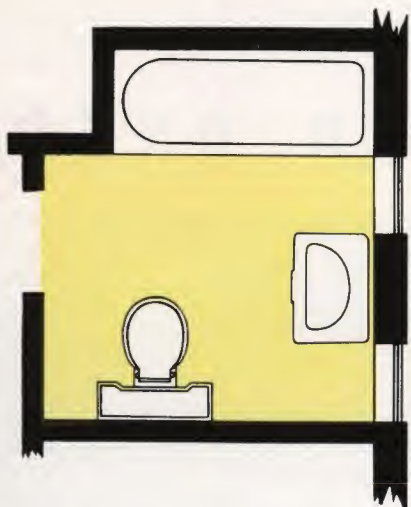

It is hard to believe that this modern bathroom was converted from this old-fashioned one.

Your bathroom can be changed into a modern one like this for less than you probably expect.

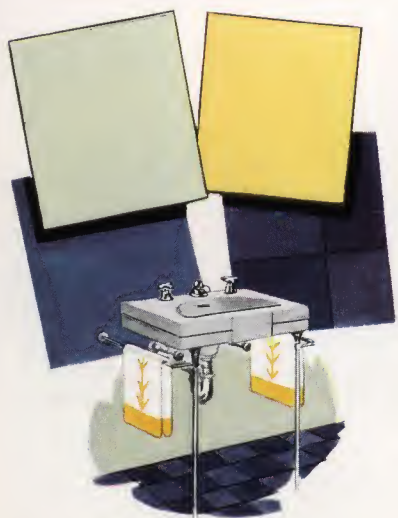

THERE ARE 3 STEPS *in planning Modern Bathrooms*

The first step in planning the bathroom is to secure a satisfactory floor layout.

The second step is to make up your mind regarding lighting effects, architectural details, etc.

The third step is the choosing of materials and selecting the color harmony best suited to your taste.

1

ARRANGEMENT OF FIXTURES, PIPING SYSTEM AND ACCESSORIES

In the basic arrangement of fixtures in a room, there are a number of factors to take into consideration—the location of doors and windows for one—the placing of the radiator for another. Generally speaking, fixtures should be placed where they will be most convenient, even though this may represent a few dollars additional cost. Dollars saved at the expense of convenience will prove costly in the long run. Other things that must be considered are the location of the stack and the placing of the piping to assure rapid, efficient draining. Your architect or plumbing contractor should be consulted early on fixture arrangement; for their wide experience will assure you of securing a convenient, economical room.

2

ARCHITECTURAL AND DECORATIVE DESIGN

Wall and floor materials plus interesting accessories combined with good arrangement make the bathroom harmonious. Materials for walls and floors should be selected for both utility and decorative beauty. There are many materials available some of which are mentioned on page 8. It should be remembered that the choice of tile, glass or other more expensive materials means the bathroom so treated will be permanent. If it is deemed advisable to be able to change the treatment at intervals less permanent materials such as wall paper for the walls or inexpensive linoleum for the floor can be selected. Amplifications of all kinds can be obtained through the use of interesting details in doors and windows with lighting, cabinets, mirrors, dressing tables, etc. In the selection of decorations, with the help and advice of your architect, your individuality may have free reign.

3

COLOR HARMONY

There are some basic color rules that serve as a guide and assure a pleasing, delightful room. This subject, with many suggested harmonies, is discussed further in this book.

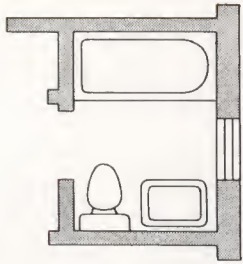

In the planning of a bathroom, most people prefer white fixtures. But Crane fixtures are also available in a choice of eight colors to suit any taste. These include, beside White, Orchid Pink, India Ivory, Citrus Yellow, Sun Tan, Pale Jade, Lucerne Blue, Persian Red, and Black.

This wide variety not only offers a selection to suit any taste, but offers an opportunity for interesting color effects in your bathroom as well. With white fixtures of course, any color scheme that suits the fancy may be used. A little greater care should be exercised when colored fixtures are used. In such a case the fixture color should be considered the basic color of the bathroom and other colors keyed to it.

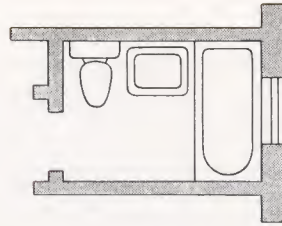

THERE ARE SIX

Basic Bathroom Plans

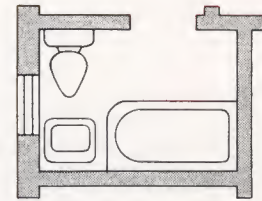

STEP 1

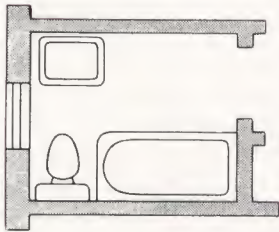

BASIC PLAN A
Lavatory and closet on one wall—tub on opposite wall.

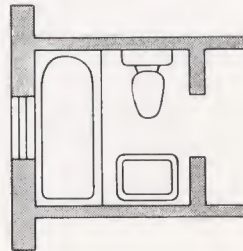

BASIC PLAN B
Lavatory, closet and tub all on same wall.

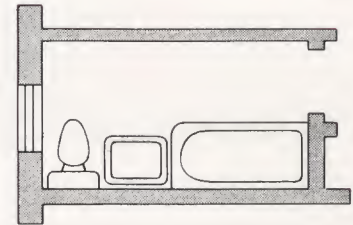

BASIC PLAN C
Lavatory and tub on one wall—closet on opposite wall.

BASIC PLAN D
Closet and lavatory on opposite wall—tub on adjoining wall.

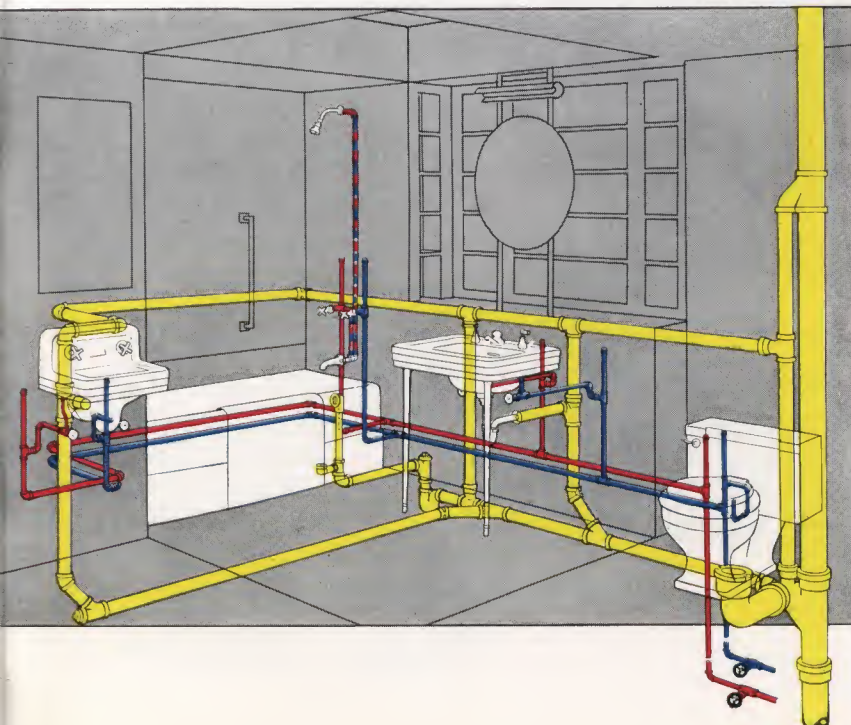

BASIC PLAN E
Lavatory and tub on one wall; closet on opposite wall.

BASIC PLAN F
Lavatory and closet on one wall. Tub on adjoining wall.

PIPING MUST BE PLANNED FOR EFFICIENT OPERATION

Regardless of the size of the room or its shape—one of the six basic arrangements shown here will fit it. These basic plans are only intended to show fixture arrangements—the location of bathtub, lavatory and closet with relation to each other.

From these basic plans you can start your bathroom layout. The more room you have for a bathroom the more opportunity you have to include additional fixtures, storage space and many other conveniences which today seem so necessary in the modern bathroom.

In any bathroom, the fixtures you see are only half of the installation; for behind the walls and beneath the floor is the hidden piping which brings fresh water, removes wastes. Upon their proper planning and installation, the efficiency of your bathroom depends. This piping must, of necessity, be of as high a quality as the fixtures themselves if you expect your bathroom to continue giving you satisfaction.

A close relationship between basic bathroom plans and the piping system can best be explained by your plumbing contractor, whose business it is to know these things and whose help to you in planning your bathroom will be invaluable.

Suggestions for WALLS, FLOORS, DOORS and WINDOWS

STEP 2

WALLS AND FLOORS

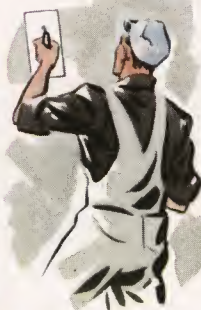

TILE—Available in a cost range from genuine ceramic tile down to low-cost sheet material which has tile marks pressed in and which is applied easily and quickly. Suitable for walls and floors.

WALLPAPER—A vast assortment of waterproof wallpapers for bathroom walls is available in a number of patterns. Wallpaper is usually used on upper walls above a wainscot of a hard surface material.

GLASS—Expensive, but Oh, so gorgeous! Available in both clear crystal, mirror-backed, or opaque, in many colors and patterns.

PLASTER — Still the most popular because it is the least expensive. A special hard finish that is water resistant may be had that will give years of service.

PAINT — There's no limit to the color possibilities you may have in your bathroom if you paint your walls and ceilings. Paint, of course, may be applied to plaster wallboard or other surfaces.

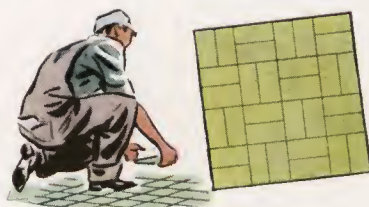

HERE are the basic points of Step 2 in planning the bathroom. In considering any material for walls and floors of bathrooms, these characteristics should be given consideration—it should be waterproof, easy to clean, unaffected by household acids, and floors should be non-slip and pleasant to the touch.

A wide range of materials for walls and floors of the modern bathroom are today available. Pictured here are just a few of the most popular materials, with illustrations which show you their range of possibilities and their method of application.

The treatment of doors and windows is mighty important in creating a pleasing bathroom. The few suggestions here will give you ideas as to the direction which door and window decoration may take in your bathroom.

LINOLEUM—Available in plain, inlaid or patterned designs in many colors. A lightweight variety is frequently used on walls, also.

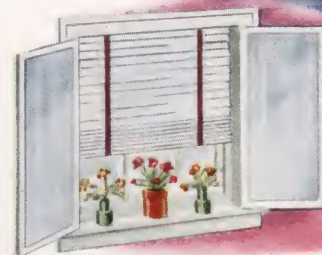

WALLBOARD—Many types of wallboard are available and these may be treated in a wide variety of ways.

DOORS AND WINDOWS

Somewhere in every bathroom there should be a full-length mirror.

Decalcomanias provide an inexpensive way for occasional door and window decoration.

Here is a conventional window with a Venetian blind and mirror shutters which open inside.

Glass shelves across bathroom windows for knickknacks and bathroom necessities are very popular.

A clothes hamper on the back of a door is a convenient place to dispose of soiled linen till washday.

The Importance of *Storage Space*

Many long years ago, someone conceived the idea of putting a linen closet down the hall from the bathroom. That most inconvenient idea has become a habit until today, even after a wide appreciation of convenience in the bathroom, one still has to grope for a towel outside the room.

Here are some interesting storage ideas—ideas that store the implements of bathroom life right in the bathroom where they ought to be.

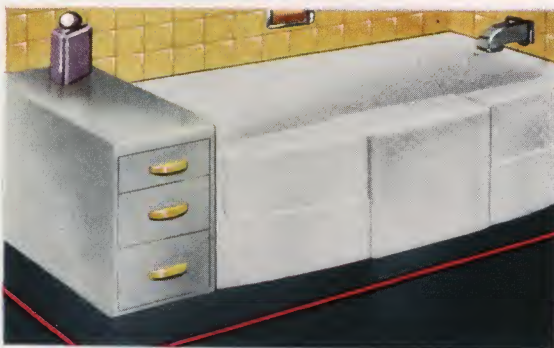

Up high is a place to store odds and ends, such as electric heaters and hot water bottles which aren't used every day.

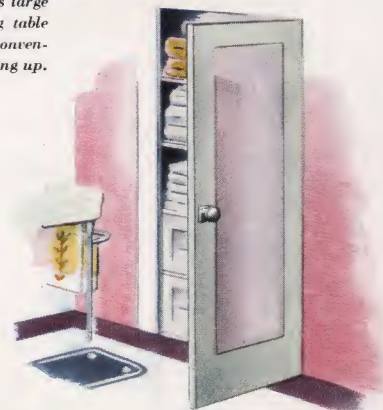

Why not a shelf for books in the bathroom.

Alongside this lavatory is an attractive make-up or dressing table with a few drawers for storage.

If your bathroom is large enough, a dressing table like this permits convenient and easy making up.

Built-in drawers and shelves in this linen closet are concealed behind a full length mirror.

At the foot of this tub is a convenient cabinet of drawers for the storage of linen and other bathroom necessities.

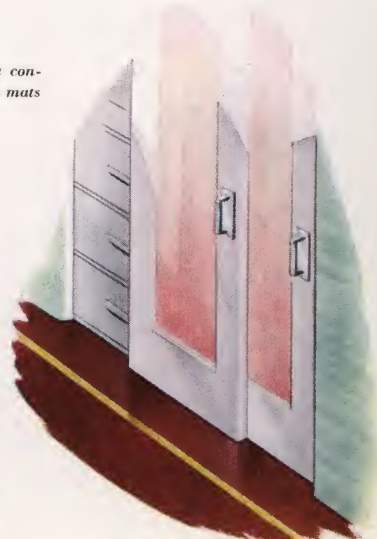

Here, behind a sliding mirrored door, a convenient chest of drawers holds towels, bath mats and other bathroom supplies.

An interesting arrangement of drawers and shelves around a door opening into the bathroom.

Underneath a window there is almost always unused space. Box it in and put a clothes hamper in this convenient location.

Color

THE NEXT STEP IN PLANNING AN

Individual Bathroom

Bathrooms today are colorful—reflecting the personality of the owner—the extent to which you wish to use color in your bathroom is largely a matter of personal taste; however, there are definite color harmonies which you may follow as a guide and which will assure you a room both charming and harmonious—one in good taste.

STEP 3

New colored fixtures will help in adding a touch of color to the room and where colored fixtures are used, the color accents should be planned to harmonize with them. If the fixtures are white, there is no end to the color possibilities of floors, walls, ceilings, towels or curtains that may be used.

On the following pages we have worked out a series of pleasing color schemes using blue, green, red, yellow, orchid and brown as the basic colors and keying the other colors in the room to them.

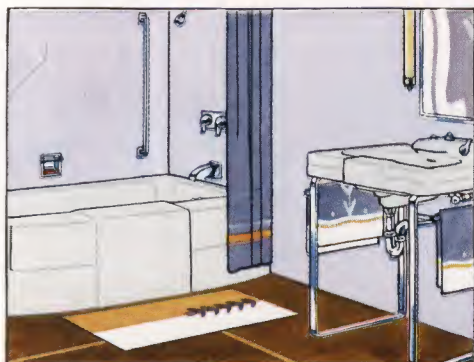

It should be noted that each one of these schemes is simply intended to show color relation, and you are by no means restricted to using the color as indicated in the sketch. Thus in the first sketch, the wall might be yellow, the light blue might be used on the floor and the dark blue might be picked up in the towels and bath mat or the curtain. Basically, however, the color

scheme is the same as that illustrated.

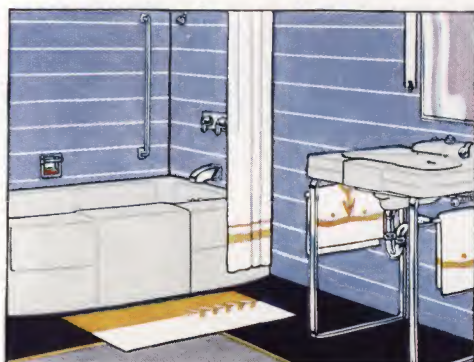

Whether your room should be bright with color or pleasingly treated in pastel shades is largely a matter of personal preference. Probably if your bathroom faces north you will want bright, sunny colors to predominate as this will make the room more cheerful in the dull north light. Certainly, if the room is naturally dark, light colors will make it more attractive; while on the other hand, in a room facing the south you will probably prefer cool greens or blues. Where colored fixtures are used, they will, to a large measure, determine what colors you can most successfully use with them. White fixtures, of course, are suitable to any color scheme. At any rate, let your bathroom fit your personality and pick a color scheme that you, personally like and will enjoy, day after day.

The color harmonies shown on the following pages were scientifically selected by means of a color wheel. While they all represent good harmonies, some will appeal to you more than others. The wide variety makes it possible for you to select the one best suited to your taste.

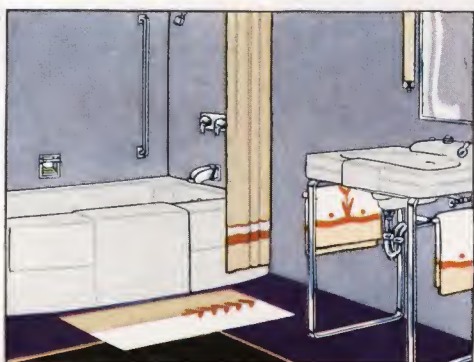

Blue

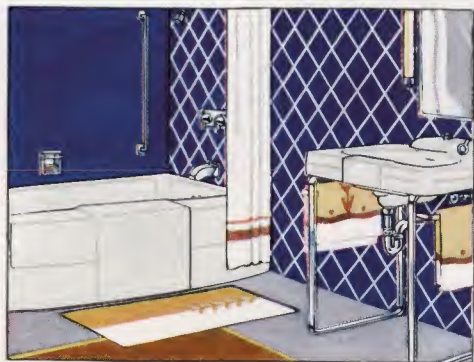

Blue-Jay Walls, Gray-Blue Shower Curtain and Towels. Golden-Tan Linoleum Floor. Ochre and White Rug with Gray-Blue figure.

Ultramarine Blue Walls—with Crisp White Stripes. White Shower Curtain and Towels with Ochre Trimming. Night Blue Linoleum—with Blue Jay Center. Ochre and White Rug.

French Toast Walls—with Diagonal White Stripes. Pale Turquoise Blue Shower Curtains—with White and Mistbeige Trimming. Blue and White Towels—with Mistbeige Trimming. Blue and White Rug. Maize Yellow Floor with Imperial Blue Center.

CRANE MAKES FIXTURES IN A WIDE RANGE OF STYLE AND PRICE

Neuvoque Bathtub—C 3225 The newest development in a bathtub of functional design. Low height, straight sides, large flat bottom. Wide rim seat is extremely convenient for foot bathing or when dressing. Made in 5 and 5½ ft. lengths, recess or corner designs. C 3240 is same style except for recess installation.

Coronova Bathtub—C 3285 A beautiful tub in modern panel design, only 16 in. high from floor to rim. Smooth, flat bottom gives greater security when bathing. Made in 4½, 5, 5½ and 6 ft. lengths. May be had for right or left-hand corner. C 3306 Same as above but recess pattern.

But regardless of the importance of floor arrangement, of color harmony, of architectural details in bathroom planning—the subject that should receive the most careful consideration is that of fixture selection. After all, it is the fixtures in the bathroom that have the greatest influence on its appearance; and certainly on them the convenience of the bathroom is largely dependent.

It is with a feeling of pride that any homeowner can point to fixtures carrying the name Crane. These fixtures will give efficient, economical service year after year—proof of the care with which they are designed and the quality of their construction.

Neuvoque Receptor Bath—C 3190 Where small space or unusual design makes the use of a conventional tub impractical, this Receptor Bath will make an ideal installation. Only four feet across, its unique design gives the equivalent of a bathtub 5½ ft. long. Ideal for shower bathing.

Interesting and Practical Accessories

There are many styles of mirror and medicine cabinets from which to select.

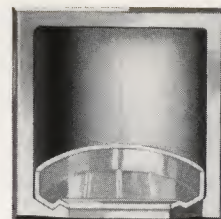

Chromium Plated Toilet Paper Holder.

A grab bar of gleaming chromium—an important item for every tub.

There's almost no limit to the variety of sizes and shapes of recessed or bracket type bathroom accessories.

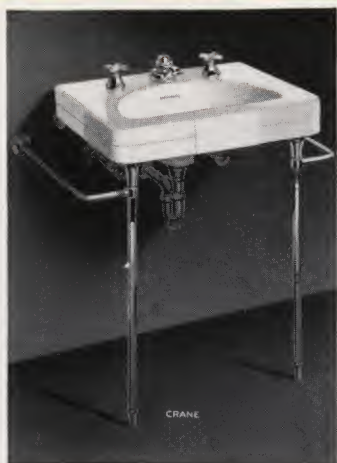

Popular recessed soap dish.

Towel bars are available in metal, glass and porcelain enamel in a wide variety of lengths.

CRANE LAVATORIES AND CLOSETS

Diana Lavatory—C 129 Charming new in design, the Diana paneled lavatory possesses all those features you would expect to find in a much higher priced lavatory. Sizes 24 x 20 in., 27 x 21 in. Made of vitreous china—easily cleaned.

Neuvogue Lavatory—C 128 Has the controls grouped together at the center, leaving the top area free for toilet articles. Basin has the width at the front where it is wanted. Flat bar support as shown or with metal legs or pedestal base. Vitreous china.

Drexel Lavatory—C 167 Modern panel design with extra large basin. Made of vitreous china — easy to clean. Spout moulded into fixture, gives tempered water. Fittings are mounted on an angle panel. Sizes 22x18 and 27x21.

CRANE fixtures come in both a wide price and style range, but regardless of the fixtures selected even when the budget is severely restricted the quality is always Crane.

On these pages are illustrated a few fixtures from the complete Crane line. They may offer a suggestion to you on the planning of your bathroom. All are available in the eight Crane colors: India Ivory, Citrus Yellow, Sun Tan, Pale Jade, Lucerne Blue, Orchid Pink, Persian Red—Black as well as White.

Norwich Pedestal Lavatory—C 255 A handsome lavatory made of vitreous china, easy to clean. Has a full pedestal making a decidedly attractive installation. Single mixing faucet gives tempered water. Quick draining Securo waste operates at a touch of a finger. Fittings, chromium plated. Sizes 30 x 24 in., 27 x 22 in. and 24 x 21 in.

Hermitage—C 652 An extremely compact lavatory of gleaming vitreous china for the powder room or half bath. Back protects wall. Sizes 20 x 13½ in. and 26 x 13½ in. Has chromium plated pop-up waste and faucets. May also be had with single mixing spout to give tempered water.

Corwith Dental Lavatory—C 1213 A sanitary convenience that will appeal to the fastidious taste—an additional lavatory in the bathroom to be used when brushing the teeth. A compact shelf back dental lavatory with a single spout for tempered water. Sanitary advantages of integral flushing rim. Made of vitreous china. Size 16x15 in.

Neuday Lavatory—C 2504 This Cabinet Lavatory combines simplicity with maximum convenience. Made of porcelain enamel on cast iron, strong and sturdy. Basin is compact yet of ample size. Roomy all-steel cabinet, baked enamel finish, and shelf-in-door feature. Available in two sizes 19 x 17 in. and 24 x 18 in.

Neuvogue Closet C 10381 A truly modern closet to suit today's tastes. The tank has been narrowed to give slender lines to the fixture. Solid base at the floor makes cleaning easy leaving no hidden corners. The seat is plain surfaced when closed to harmonize with the overall design; open to a hygienically correct curve approved by medical authorities.

Manor Closet—C 10490 Truly a closet for the finer home. One-piece construction and extremely quiet action. Low height seat means better hygiene and greater comfort. Whirlpool action and self-draining jet. Cover and seat finished with covered plastic.

Merit Closet—C 11000 Tank and bowl are close coupled, making for handsome appearance and assuring quiet action. Modern panel design means an attractive bathroom. Made of gleaming vitreous china, easy to clean; whirlpool action and self draining jet.

Siwelclo Closet—C 10384 A correct posture closet of handsome design. Tank and closet form a close coupled unit assuring quiet action. Closet is low in height and has a strong jet flushing action.

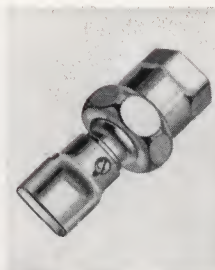

CRANE SHOWERS

A shower stall floor of seamless rubber—warm and comfortable to the feet, prevents slipping.

Shower compartments are available if you are putting a shower in the basement or modernizing an old closet.

This Economy shower-head uses less water than the conventional type. Directs all on the bather.

The Refreshor shower head assures a snappy, needle-like spray. It saves water, is easily cleaned.

A shower that may be added to your tub, easy to install, without breaking into walls.

Twin Valve Shower with Economy Head. Medium priced yet designed for maximum convenience.

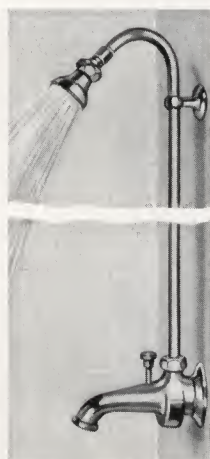

THE IMPORTANCE OF FITTINGS

After all, beautiful fixtures deserve beautiful fittings and the gleaming chromium faucets and waste controls that grace Crane-Equipment are indeed a compliment to the inherent beauty of these fixtures themselves. But "handsome is as handsome does" and the beauty of Crane fittings is more than skin deep. The *Securo* waste control on lavatories not only works at a touch of the finger, but assures rapid

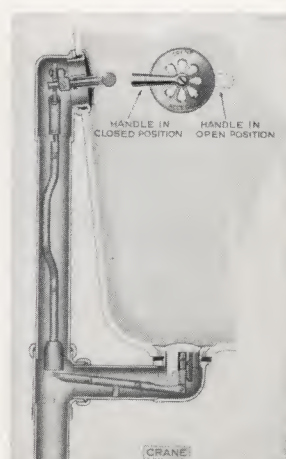

draining—water that goes with a rush carrying sediment along, leaving the bowl clean. And again, in closets a touch on the handle gives a quiet, rapid flush that means no embarrassment to owner or guest. Sturdy, dependable Crane fittings—faucets—showerheads—spouts—all assure years of service and a lifetime of beauty and satisfaction as well—all are made of sturdy brass, finished in gleaming chromium.

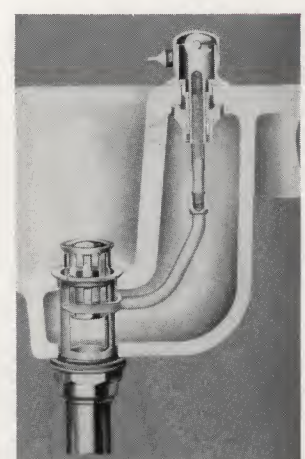

Crane Deviator Spout for showers. When the water is turned on it runs from the spout. It may be tempered by hand or toe to suit the bather. The knob is raised and the water gushes from the shower head. When the water is shut off knob drops back. No chance of an inadvertent dousing.

Newsleeve Faucet Unit—Longer life for faucets! Entire operating unit may be replaced without removing faucet from fixture, slips in like a cartridge.

Accesso Bath Waste—An exclusive Crane design, that seals the tub at outlet; water used by previous bather cannot contaminate fresh supply. Positive lever action—tight and trouble-free.

Lever Action Securo—Quick draining lavatory waste. Produces rush of water which leaves the bowl clean. Positive action operates with a touch of the finger. Strainer removable.

SEE YOUR ARCHITECT AND PLUMBING CONTRACTOR

PERHAPS you are now at the point where you have decided to add a bathroom to your home or to remodel one that no longer gives you the service you have a right to expect. If so, what is the first step to take to secure the kind of bathroom you want?

Here is where your architect and plumbing contractor can help you. They can quickly show you how your fixtures can be arranged for maximum efficiency and minimum expense. They can also give you valuable advice on fixtures to fit your room and your pocketbook. Your plumbing contractor can also arrange all the details of installation and handle it on the Crane Budget Plan if you like. Above all, he

will assure you a safe, trouble-free installation of these fixtures as well as of the hidden piping. Make a note now to phone him or drop into his shop and talk it over while you are thinking about it.

THE CRANE DISPLAY ROOMS

In selecting fixtures which are related in design and which will completely satisfy every requirement of your family nothing can be more helpful than a visit to a Crane Display Room. There is one near most people and even if you live miles away you will be well repaid for the time and trouble involved in a journey to your nearest Crane Branch.
